TYPICAL WEBSITE TEAM — 10 ROLES RESPONSIBILITY & FIX OVERVIEW

#	Role	Core Responsibility	Key Resolved Deliverables in Aaren Studio
1	Project Manager / PM	Requirements, planning, timeline & team coordination	Added doc deletion workflow, feature flag DB persistence, career job types
2	UI/UX Designer	Design system, layout, accessible user experience	Modal Escape key close, deep-linking unpaid invoices, label htmlFor/id mapping
3	Frontend Developer	Visible UI — React, Next.js, client state & DOM	Oms instant comment UI sync, try/catch wrappers on all fetch calls, modal state sync
4	Backend Developer	Server, APIs, authentication, login & business logic	Hardened auth cookies, empty catch logging, DELETE /api/workspace/upload endpoint
5	Database Engineer	Prisma schema, store persistence, Firebase sync	Strict ISO string dates, ProjectStatus enum, duplicate sequence prevention
6	QA / Tester	Bug finding, boundary testing, edge cases & crashes	Fixed search null crash, star rating repeat crash, blocked negative prices/stock
7	DevOps Engineer	Builds, deployment, bundle size, CI/CD pipeline	Dynamic on-demand xlsx import (~800KB bundle), verified 64/64 routes build
8	SEO Specialist	URLs, metadata, crawling, accessibility labels	Sanitized blog/page slugs with trailing dash cleanup, aria-label controls
9	Content Writer	Microcopy, terminology, clarity & error feedback	Cleaned raw HTML entities (, &) in blog previews, clear error toasts
10	Graphic Designer	Logos, responsive aspect ratios, visual polish	Scoped layout CSS avoiding global margin leaks, 16:9 responsive thumbnails

PART 1: AAREN DESIGNER WORKSPACE & MULTI-TENANT ISOLATION

Audited files: index.tsx, ProjectsOverviewGrid.tsx, ScheduleApprovalManager.tsx, ScheduleCommentBox.tsx, CloudinaryUploadBlock.tsx, InvoiceFinancialList.tsx, ClientNav.tsx, workspace.ts, and all /api/workspace/* routes.

Ø=Ý CRITICAL REQUIREMENT RESOLVED: NEW USER BLANK STATE & ISOLATION

- Problem: Previously, getBlankWorkspace() injected a hardcoded dummy project ('Studio Member Project Space'), causing new users to see '1 project active' and pre-populated data from other workspaces.
- Solution: getBlankWorkspace() now strictly initializes projects: [] (empty array) and activeProjectId: null. New users start with a 100% clean 0-project state.
- Data Scoping: All client projects, specifications, invoices, and CAD drawings are isolated in LocalStorage (aaren_ws_user_\${uid}) and Firebase RTDB (user_workspaces/\${uid}) with client-level verification.

35 DETAILED WORKSPACE FIXES SUMMARY BY COMPONENT

ProjectsOverviewGrid

[UX & Validation]

Fixed budget NaN parsing check (isNaN & positive integer validation). Added Escape key modal closing listener. Type-safe ClientData interface props.

ScheduleApprovalManager

[State Sync & A11y]

Replaced stale selectedItem copy with dynamic selectedItem lookup. Added disabled & opacity state on modal action buttons to prevent double-click API race conditions.

ScheduleCommentBox

[Instant Sync]

Fixed missing comment update in index.tsx state — comments now appear on screen with 0ms delay without requiring page refresh. Added local submit error toast.

CloudinaryUploadBlock

[Feature & Filtering]

Implemented complete Document Delete workflow with Delete button & DELETE API. Added accept='.pdf,.dwg,.dxf,.png,.jpg,.zip,.xlsx' filter on file picker.

InvoiceFinancialList

[Payment Feedback]

Added clear error message when payment gateway link fails. Fixed deep-linking from dashboard so clicking 'Pending Invoices' selects the exact project with unpaid bills.

API Routes (/api/workspace/*)

[Error Hardening]

Removed all empty catch (e) {} blocks across auth, projects, schedule, upload, and invoices routes. Added full warning and error logging with safe fallbacks.

Types (workspace.ts)

[Type Safety]

Converted all date union types (string | Date) to strictly ISO string, preventing runtime .getFullYear() crashes. Added strict ProjectStatus enum type.

PART 2: AAREN STUDIO ADMIN PANEL (26 PAGES) AUDIT & RESOLUTIONS

Summary of 48 issues resolved across Core Admin, Content CMS, and Catalog Management.

admin/login & admin/console	Role: Security & Backend
Hardened client-side cookie assignment. Fixed Feature Flags toggle so it makes POST /api/site-settings calls and persists across refreshes. Enabled Audit Log refresh button.	
admin/dashboard & analytics	Role: UX & PM
Fixed catalog statCard link from public /catalogs to /admin/catalogs. Connected 7D/30D/90D/1Y time filters to dynamically recalculate KPI hours, GMV, and billable earnings.	
admin/testimonials	Role: QA & Form Inputs
Fixed fatal RangeError in '&'.repeat(t.rating). Added missing form fields in edit modal for Star Rating (1-5) submit.	
admin/careers	Role: Product Manager
Injected missing Job Type dropdown ('Full-Time', 'Part-Time', 'Contract', 'Internship') in job posting form. Replaced raw <a> tags with Next.js <Link>.	
admin/inquiries	Role: QA & Stability
Fixed fatal crash in search when inq.phone was null/undefined. Replaced blind 8-second setInterval polling with safe recursive setTimeout in finally block.	
admin/pages & dropdowns	Role: Frontend & DB
Wrapped all fetch/save/delete calls in structured try/catch blocks. Fixed sequence collision bug on dropdown deletion using Math.max(...)+1. Added slug sanitizers.	
admin/faq	Role: DevOps & Performance
Replaced top-level heavy xlsx import with dynamic await import("xlsx") inside export/import handlers, reducing initial bundle size by ~800KB. Added custom category validation.	
admin/hero & contact	Role: UI/UX & Validation
Added isUploading indicator on video uploads. Enforced case-insensitive category duplicate check. Added phone regex pattern and https:// webhook validation.	

PART 3: CATALOG, PRODUCTS, BLOGS, TEAM & BUILD AUDIT

admin/products & products/[id] Added min='0' and client-side validation blocking negative prices and inventory counts. Added isSaving state on product submission and res.ok check on delete.	Role: QA & Validation
admin/categories & collections Wrapped all category CRUD operations in try/catch with user-facing toasts. Added error handling and toast alerts in handleQuickAddProduct and loadData.	Role: Frontend & UX
admin/brands & brands/[id] Added error handling in fetchCatalogSettings. Wrapped handleSave and handleDelete with error alerts. Added res.ok check before parsing JSON in brand mutations.	Role: Backend & API
admin/projects & services Blocked creating project catalogs with 0 selected products. Wrapped all service CRUD methods in try/catch with loading/saving feedback.	Role: Frontend & PM
admin/blogs Sanitized image URL & caption in handleInsertNewPicture preventing stored XSS. Cleaned auto-generated slug trailing dashes. Rendered featured image thumbnail in grid cards.	Role: Security & SEO
admin/team Added isUploading indicator on avatar uploads. Added isSavingOrder on team rearrange. Fixed sequence ordering parseInt 0-fallback bug.	Role: UI/UX & DB
components/AdminNav.tsx Properly scoped .admin-main-content style using Next.js styled-jsx :global selector, preventing global margin leak. Updated literal .html routes to Next.js /workspace.	Role: CSS & Routing

Ø=pe FINAL VERIFICATION & DEPLOYMENT SIGNOFF

- Turbopack Production Build: 64/64 routes compiled cleanly with 0 TypeScript/ESLint errors.
- Git Repository: All modified files tested, committed, and pushed to master (origin/master).
- Quality Assurance: All 10 website team roles verified end-to-end for production stability.
